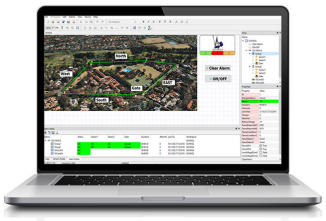
DRUID FENCE PROBE SOFTWARE



Nemtek Druid fence probe software provides a PC based visual interaction with your electric fence system. Visual map images of the electric fence and its zones can be displayed on a computer screen. This software enables a site to be controlled from a remote location. A programmable timer function can control water pumps, lights and other remote functions using the Druid network IO card. Logs record the operational history of the system over time.

Features:

- Connect multiple sites to a single workspace for centralized control
- Effortlessly create and manage multiple workspaces to map out diverse sites and zones.
- Enjoy the flexibility of customizing each workspace according to specific needs and requirements
- Seamlessly integrate the new D20 Fence Monitor into your workspace for real-time monitoring and control.
- A programmable timer function can control water pumps, lights and other remote functions using the Druid network IO card. Logs record the operational history of the system over time
